

FHC (Fulvic Humic Concentrate)

ONE OF NATURE'S MIRACLES OF UNPARALLELED PROPORTION!

- One of nature's most powerful organic electrolytes
- Produces energy
- Increases endurance
- Super-oxygenate the blood - delivers O2 directly to muscle cells
- Stimulate metabolism
- Improve circulation
- Repair, regenerate, and restore cells
- Increases metabolism of proteins
- Structure hormones
- Control inflammation
- Catalyses enzyme reactions
- Regulate the thyroid and thymus glands
- Enhances cell division, elongation and permeability of cell membranes
- Catalyses vitamins within the cell
- Chelate toxic or inorganic metals and chemicals, as well as essential major and trace elements
- Synthesizes or transmutes minerals
- Chelates all monovalent & divalent elements to which it is exposed
- Break down complex nutrients, elements, and other substances for easier absorption or elimination

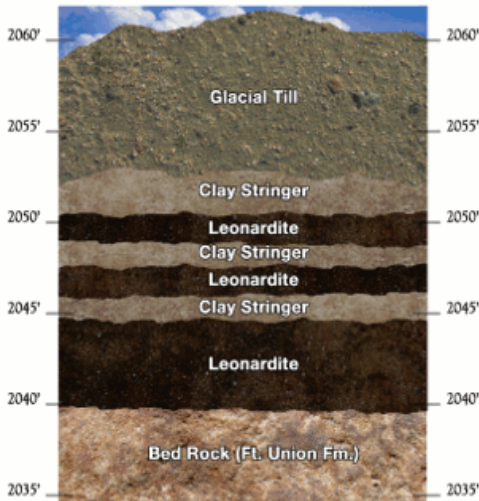

TRANSFORM 4 LIFE

- Regulate and supercharge the immune system
- Improve brain function (including memory)
- Revitalize libido (desire and function)
- Remineralize the body
- Transports and enhances nutrients
- Cleanse, neutralize, and remove toxins
- Detoxifies pollutants (including radiation)
- One of the most powerful natural free radical scavengers & antioxidants known

NUTRIENT FOR SPORTS PEOPLE SECOND TO NONE-

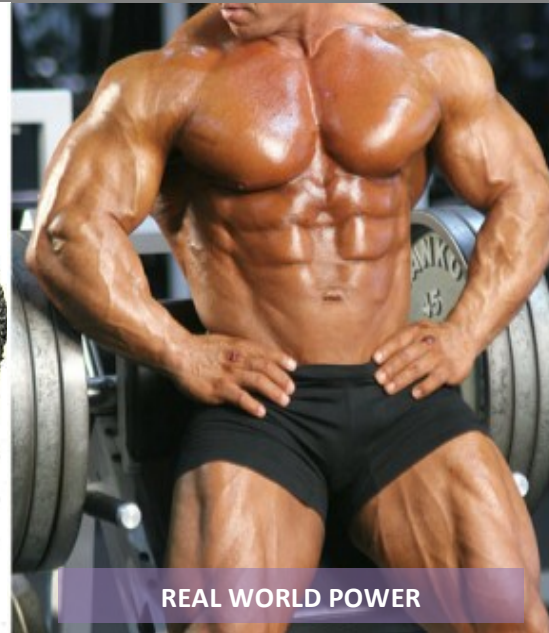

Typical Section
Maximum Coal Thickness Assumed

LEONARDITE

HUMIC ACID / FULVIC ACID

REAL WORLD POWER

WHAT IS LEONARDITE?

Is a natural form of humates, completely organic in nature and beneficial in a wide variety of applications.

LEONARDITE

The deposition of concentrated organic acids is a lengthy process taking millions of years. If you can imagine a prehistoric marsh or peat bog where plants are harvesting carbon dioxide from the atmosphere and using the sun's energy to build plant biomass. These plants feed insects and vertebrates and as plants and animals die they contribute the carbon back to the bottom of the bog. Over millions of years this cycle of organic matter is concentrated and compressed into layers in the earth.

WHERE DOES HUMIC/FULVIC ACID COME FROM?

Humic and Fulvic acids are the final break-down constituent in the decay of plant and animal materials. These organic acids are found in prehistoric deposits.

HUMIC ACID - brown to black in colour, can behave as both a donor or acceptor of electrons. It will bind to both positive and negatively charged ions making it the most powerful free-radical scavenger and natural anti-oxidant known. Humic is the organic colloid that is the fundamental building block of life.

FULVIC ACID - golden in colour is the element found in humus, the highly nutritious layer of the earth. It assists in enzyme reactions and helps to increase nutrient absorption. Small in size that it is able to penetrate even into the mitochondria, the workhorse of the cell.

COMPETING ATHELETES CHOICE - WORLD WIDE

Since 2012, an Australian made extract that guarantees purity and quality and yields a consistent and predictable product. Plant derived, bio-available liquid mineral concentration ensures superior absorption into the blood stream. Made from ancient plant matter rich in minerals, elements, amino acids and b vitamins in a pH balanced state. Contains no yeast, mould, flavourings, excipients or other additives. Natural, rich dark brown in colour.

AUSTRALIAN MADE FHC

A high quality extraction Fulvic Humic Concentrate that has been specifically manufactured, sterilized, standardized and prepared safe for human consumption.

TRANSFORM MORE THAN YOUR BODY WITH ATHLETES ADVANTAGE - FHC!

The use of Fulvic Acid in sport is growing rapidly. Its power to provide optimal nutrition for the sports person along with significant improved endurance, decreased recovery times and protection against injury is unsurpassed.

1. EVERY ATHLETE NEEDS FULVIC HUMIC CONCENTRATE FHC

There is no other nutrient known which can:

- Provide the most powerful electrolyte in existence
- Reduce the impact of lactic acid during and after sport
- Provide optimal protection against production of oxidants
- Reduce the impact of carbon dioxide during sport
- Dissolve silica to maintain strength of joints/connective tissue
- Provide useable oxygen directly to our cells

2. FHC IS 100% UNIQUE- CONTAINS 45% OXYGEN

Fulvic acid contains approximately 45% oxygen that is highly bio-available and readily available to human cells. It's chemical components allows it to deliver oxygen directly into the cell membrane. As an athlete, more oxygen means you can train longer and recover more quickly.

3. FULVIC ACID - NATURE'S MOST POWERFUL ELECTROLYTES

Many research articles have proven fulvic humic acid's ability to maximize the electrical chemistry of the cell. Fulvic humic acid is so powerful it naturally contains 100-percent of the macro- and micro-nutrients needed by our bodies and around 72 different trace minerals. When sweating occurs during prolonged exercise and blood electrolytes are being lost through the skin, fulvic acid will immediately replace these and prevent performance loss. Fulvic acid is the only substance known to man with this ability. This fact alone can compete with any electrolyte/energy drink on the market today!

4. AUSTRALIAN FULVIC HUMIC CONCENTRATE

Odourless and tasteless in glass of filtered water.

FHC Facts:

Well being - Serving size: 8 to 12 drops twice daily in glass of filtered water (chlorine and fluoride free)

Training - Serving size: 20 drops half hour before training in glass of filtered water (chlorine and fluoride free)

Purified water

Humic acid (naturally occurring)

Fulvic acid (naturally occurring)

74 + Trace minerals

18 Amino acids (including) Alanine, Glutamic Acid, Glycine, Histidine, Isoleucine, Leucine, Methionine, Phenylalanine, Serinine, Threonine, Tryptophan, Valine

Trace Vitamins: A, D, E, B1, B2, B3, B6, B12

Other naturally occurring Humic substances
